

# Team OCEAN Tours - Food Webs

A **Food Web** is an interlocking system of food chains that describes what eats what in a habitat.

Some members of a **Food Web** take in energy often as sunlight and make food, we call those **producers**.

Other members of a **Food Web** eat what is produced or other animals, we call those **consumers**.

What habitat did you observe today? \_\_\_\_\_

Use the spaces below to producers and consumers in a **Food Web** you observed in this habitat.  
Draw arrows to connect producers and consumers.
